

**NATIONAL CACTUS AND SUCCULENT GARDEN AND  
RESEARCH CENTER, PANCHKULA, HARYANA, INDIA**

By

**Dr. J. S. Sarkaria**

## Preface

My father, Dr. Jagdish Singh Sarkaria, passed away on August 15, 2004. He left behind a manuscript recalling the genesis of the famed Cactus Garden in Panchkula and containing a brief guide on the propagation of Cacti and other Succulents, as well as a detailed description with numerous photographs of the various species growing on the rockeries and in the glasshouses of this garden.

I have completed and compiled this material with invaluable advice and assistance from the Garden's staff and the members of the Cactus and Succulent Society. However, this is still a preliminary version of an intended book. Besides shortcomings of layout and composition---which really come under the purview of, and can be adequately taken care of, only by a professional type-setter---there probably remain botanical and textual inaccuracies. My main object in circulating this document is that these latter be brought to light. I'll appreciate very much if these *mistakes/corrections* are communicated to me as soon as possible (preferably by e-mail) and thank all such people in advance.

I emphasize that the legal heirs of Dr. J. S. Sarkaria have decided that profits, if any, from the possible publication (enquiries regarding this

should be sent to the address below) of this book will be donated to the Cactus Garden and/or Society. These were both founded by my father, and their continued well-being is our only interest in this matter.

Some suggestions have already been received by me from members of the Society regarding the further *improvement and development* of this book, e.g., that material be added in the text or as an appendix so as to make the methods of growing these plants transparent even to a rank beginner; or again, that an appendix be added on their medicinal aspects; and another, on the rules followed in writing and pronouncing botanical names; yet another, on the human interest stories connected with some of these plants, with photographs and brief biographies of some of the discoverers whose names figure in the text; and so on, and so forth (see last page, 248). I hope that this desire to actively participate in perfecting what is, essentially, *their* very own book, on *their* very own Cactus Garden, will become pervasive, and thus ensure that both the Garden and Society will continue to thrive.

K. S. Sarkaria,

## Acknowledgements

MR. ANIL KAUSHIK helped out my father for the last several months of the latter's life, and prepared the first typescript from my father's handwritten version. The initial photographs were taken mostly by my father and by MR. PARAMJIT THAKUR, some digital pictures were taken later by MR. B. P. SINGH, and a revised map of the garden was provided by BRIGADIER BEWLI. The garden's staff, especially MR. SUSHIL KUMAR and MR. HANS RAJ, were most helpful in clearing many doubts and in identifying the location of the plants on the various rockeries. They are the ones taking day-to-day care of, and maintaining in good shape, this glorious heritage bequeathed by my father to the city of Panchkula, and to all plant-lovers in general. The Sarkaria family extends its heart-felt thanks to them, to the Panchkula horticulture department and the administrators of Haryana Urban Development Authority, and to all the members of the National Cactus and Succulent Association, for the passion and zeal with which they are carrying forth the torch lit by my father. I emphasize that this is a provisional and *very incomplete list* of those who have contributed, and will swell many times as the book develops. Yet, I fear, there are bound to remain some whose contribution I will be remiss in explicitly, or adequately, acknowledging: I can only hope that they will forgive me this lapse.

## Table of Contents

### Part A. INTRODUCTORY

1. GENESIS. How I became a cactophile, and a brief account of the events leading up to the inauguration of the garden. 1-12
2. WHY CACTI ? An introduction to cacti and succulents. 13-19
3. PROPAGATION OF CACTI AND SUCCULENTS. Or, what goes on within the confines of the Propagation Area of the garden. 20-35

### Part B. DISPLAY ROCKERIES

4. THE TOUR BEGINS! The location and layout of the garden, and how its rockeries were made. As you enter, there is a bed of *Agaves* to your right, and behind this, some *Burseras* and *Baobabs* ... 36-45
5. ROCKERY I. This rockery, though small, only 20 x 10 meters, introduces you at once to over fifty species of cacti and other succulents, ranging from a towering *Pachycereus* to many low-growing species. 46-56
6. ROCKERY II. Botanically, the most important landmark and asset of this garden, this long sprawling feature focuses on *Carallumas*--- an account of almost all the species is given---and some other Indian Succulents. 57-83
7. ROCKERY III. The very first to be built in this garden, this rockery is ablaze with Golden Barrels, and its highlight is a comprehensive collection of the genus *Mammillaria*. 84-107
8. ROCKERY IV. Welcome to our botanical collection of *Aloes*! About thirty-five species in all, some yet to be identified.

- 106-120
9. ROCKERY V. It has a beautiful collection of *Nolinas* and *Beaucarneas*, a majestic *Pachypodium*, and much more. And, next to it, are our *Cycads*.  
121-127
10. ROCKERY VI. It has the largest offsetting *Echinocactus grusonii*, its focus is the genus *Echinocerei*---a detailed account of the species is given---but it also has lots of *Notocacti* and much more; besides, it has four attractive satellites VIa , VIb, VIc and VIId.  
128-154
11. ROCKERY VII. This is the largest rockery in the garden. Opposite it, is a raised satellite rockery VIIa provided with steps, from which you can have a grandstand view of this huge feature. A view not easily forgotten: about three hundred big Golden Barrels, *Saguaros*, a *Bursera* with trunk 50 cm, *Adeniums* and *Mammilarias* and *Agaves*, and *Yuccas*, *Astrophytum*s, *Kalonchoes* and *Opuntias*, and much, much more.  
155-167
12. ROCKERY VIII. Its specimen-sized plants came to us as gifts from the former Kalpataru Botanical Gardens of late MR. G.C. JAIN, and its mid-skyline is dominated by an *Allaudia procera*, about four meters tall.  
168-174
13. ROCKERY IX. A gift from the heirs of SH. O.P. BANSAL, many of his *Ferrocacti herrerae* are now 75 cm high.  
175-177
14. ROCKERY X. A small experimental rockery with three smaller satellites, for example Rockery Xa, developed mainly to study the behaviour of difficult-to-grow plants of the Indian genus *Caralluma*.  
178-186
15. ROCKERY XI. This has some very photogenic and huge *Opuntias*, a plant from Yemen, and more.  
187-189
16. ROCKERY XII. An eye-catching group plantation of *Pachypodium*s, interspersed with *Adeniums*.  
190-191

17. ROCKERY XIII. Across a little bridge, over a pond containing Water Lilies and populated with Mirror Carp and Koi fish, this display rockery is devoted to the taller-growing *Pachypodiums*.

192-193

Part C.  
INDOOR COLLECTIONS

18. ON GLASSHOUSES. Desiderata and shortcomings.

194-196

19. BCGH 1, ASCLEPIADACEAE. The Botanical Collection of Glass House 1 has many *Carallumas* and several other genera of *Stape liades*.

197-201

20. BCGH 2, HAWORTHIA. A detailed description of the different species of this genus is given. Glass House 2 has about 70 % of these; also houses a small collection of *Aloes* from South Africa and Madagascar.

202-221

21. GLASS HOUSE 3. One large bench is devoted to *Mesembryanthemaceae* Family, e.g., *Lithops*, another to *Agavaceae*.

222-223

22. BCGH 4, MAMILLARIA. We have 75 % of the described species.

224-227

23. GLASS HOUSE 5. Its design is functional, some difficult-to-maintain succulents are in a corner, e.g., of the *Carassulaceae* family. Most genera of *Cactaceae* can be found, in alphabetical order, on its benches.

228-231

24. DISPLAY GLASS HOUSE 6. It has an octagonal shape, a water feature with a bridge, and several outstanding specimens of Cacti.

232-235

25. INDEX OF PLANTS (Family, Genus, Species), References, etc.

236-248
